

CHAPTER 3

Applying Single-Case Methodology in Clinical Practice

Robyn L. Tate, BA (Hons), MPsychol, PhD

Keith D. Cicerone, PhD, ABPP-CN, FACRM

3.1	Why Conduct Single-Case Studies of Cognitive Rehabilitation?	55
3.2	Principles of Single-Case Methodology	56
3.2.A	What Is a Single-Case Study?	56
3.2.B	Defining the Critical Elements of the Single-Case Design	56
3.2.B.1	CONDITIONS OF THE INTERVENTION	56
3.2.B.2	BEHAVIOR TARGETED BY THE INTERVENTION AND ITS MEASUREMENT	56
3.2.B.3	STANDARDS OF DESIGN	57
3.2.B.4	EVALUATING WHETHER THE INTERVENTION HAS BEEN EFFECTIVE	58
3.3	Structure of Common Types of Single-Case Designs	58
3.3.A	Withdrawal/Reversal Design	58
3.3.B	Multiple-Baseline Design	61
3.3.C	Alternating-Treatments Design	64
3.3.D	Changing-Criterion Design	66
3.4	The Versatility of Single-Case Methods and Their Implementation in Clinical Practice	68
3.4.A	Tracking Patient Progress Over Time (Using an A-B Design)	68
3.4.B	Proof of Concept Evaluating a New Intervention (Using an A-B + Maintenance Design With Replication)	68
3.4.C	Adapting an Intervention to Meet the Patient's Needs	69
3.4.C.1	ENGAGING THE PATIENT	69
3.4.C.2	TREATING PATIENTS WITH MULTIPLE COGNITIVE IMPAIRMENTS	69
3.4.C.3	WHEN THE TREATMENT IS NOT WORKING	69
3.4.D	A Model to Guide Clinical Practice (Model for Assessing Treatment Effect)	70
3.5	Resources for Single-Case Studies	71
3.6	Conclusions	73
3.7	Study Questions and Group Discussion Points	77
